

# Xopero ONE MSP Backup

Build and grow a scalable MSP business with best-in-class backup & Disaster Recovery solution with no risk.

## MSP Model (Managed Service Provider)

The MSP (Managed Service Provider) model is a form of business cooperation involving the remote provision of IT services, including, among other things, ensuring the security of the client's network. Payment for MSP services is usually settled in the form of a monthly subscription, thanks to which the threshold for entry into cooperation in such a model on the part of the client is very low, and on the other hand it allows the provider to generate regularly growing and easy to forecast revenue.

## Complete protection

Expand your portfolio with a comprehensive MSP backup solution to protect any customer's IT infrastructure.

## High, scalable income

### Pay-as-you-go

Buy licenses only when you acquire a customer and pay exactly what you use.

### No contracts - no risk

Create a free account and start selling and managing customer data protection - no contracts needed. If you need, we will arrange all the paperwork - no worries from your side.

### Best prices on the market

Create your own pricing policy and margins - it's your choice.

### 24/7/365 Technical Support

Get a quick and accurate response and don't keep yourself or your customers waiting.

### 30-day trials for customers

Don't buy blind - create 30-day free trials for customers.

### Subscription model

Choose monthly or annual subscription - with no upfront investment and zero entry threshold. Eliminate any business risk.

### Any storage compatibility

Xopero ONE is a multi-storage system that provides your customers with a unique opportunity to add as many local and cloud storage instances as they need.

### Central management

Manage customers, licenses and sales in one unified MSP platform.
