XOPERO CLOUD PERSONAL
Backup and sync & share platform

Xopero Cloud Personal is a modern cloud backup solution with advanced sync & share tool. Whether you run a small business or just want to back up photos and videos from your summer vacation, we can protect all the precious data you have stored on computers and mobile devices.

Simple and reliable solution
THE RIGHT PRODUCT JUST FOR YOU

COMPUTERS MATTER

Workstations and laptops become our basic tools on which we create and store more and more critical data. That's why endpoint backup or generally endpoint protection solutions become must-have for every computer user. Backup solutions no longer protect just against data loss, but shield users against consequences of ransomware attack.

FILES AT YOUR FINGERTIPS

Manage your personal data from anywhere in the world. Access them in very simple and safe way: use the mobile application (available for Android and iOS devices), login into your account through the web browser or install Xopero on another device. All of this to make your data truly available 24/7/365.

SECURE DATA SYNCHRONIZATION

Are you concerned about the security of your data? That's good, because it's important for us too. We equipped Xopero products with an advanced sync&share application (the Briefcase), which allows a synchronization of encrypted data. This is not some simple tool offered by many popular vendors. The Briefcase app is truly unique and ultra secure.

ENCRYPTED MOBILITY

Ask yourself what happens if your phone gets damaged or stolen and all your data will get lost too? We know the answer. That's why we give you Xopero Mobile – an encrypted mobile backup for Android and iOS devices.

Back up everything that matters with Xopero's best-in-class tools and see the difference our backup solution makes. Create an encrypted backup copy of your contacts, messages, photos, music, video and more.

Disaster design
IN A NUTSHELL

USER ERROR: accidental data delation happens. Employee can delete some data thinking its safely archived or erase a document he was certain is no longer necessary (only to find out later that is vital!)

HARDWARE FAILURES: unfortunly they can occure at any time, so all you can do is minimize the risk.

DATA CORRUPTION is basically effect of a common system errors or bugs. There can be many causes like: improper shut down or restart of the system, malware infection or software and hardware issue.

COMPUTER VIRUSES & MALWARE: while downloading or exchanging files, if you're not careful enough, your computer can end up with a nasty virus or fall prey to ransomware attack.

THEFT OR LOSS: laptops and mobile phones have become attractive and simple targets for thieves.

SIMPLE CONFIGURATION

An intuitive interface, simple backup configuration and the Briefcase application to sync & share your data – Xopero offers you a quick and easy way to ensure the safety of your data.

THE BEST INVESTMENT AGAINST ANY MALICIOUS THREAT

For maximum security Xopero encrypts data with AES 256. Which is one of the safest algorithm in the world and the international safety standard. Among others, it is used by banks to secure financial transactions and by NSA (the National Security Agency) to protect top secret documents. The data is encrypted on the user device and transmitted over the secure SSL protocol,

SECURE DATA CENTER

Your data will be stored in our secure data centres - located in the USA, Germany and Poland. All data centres are purpose-built and located in areas with infrastructure designed to support leading technology companies. This enables us to offer highly available, resilient, cost efficient and secure interconnected cloud environments to store your data.

Our story
XOPERO SOFTWARE

Xopero develops and produces a comprehensive range of professional tools for protecting and restoring critical business data. We are Europe's leading provider of data backup solutions. Our products allow backup and recovery of: files, folders, endpoints, databases, mailboxes, servers, network localisations and virtual environments

We understand how important our client's data is to their business. We constantly develop and improve Xopero products to provide even better data protection, data security and business continuity. Our aim is to limit the risk of data loss and business downtime to zero.

Our customers reflect a wide range of business sectors: small to medium-sized organisations, large companies, public administration, banking and finance, education, medicine, telecommunications and IT.

Act before it is
TOO LATE

1. Ransomware usually spreads by phishing mails, through malicious attachments like .zip, .pdf, .doc, .exe or.js files (and many more).

2. Locker ransomware uses asymmetric encryption which can be extremely difficult or even impossible to crack.

3. Because ransomware attack are mostly designed to make an easy money, new malwares are becoming more and more dangerous and sophisticated.

4. Victims are usually forced to pay a ransom in bitcoins, which makes tracing and prosecuting the perpetrators difficult.
