Central management

Management Center allows to remotely control all backup processes in your company. With our application you can remotely manage all servers and computers. Now, the entire backup environment can be configured using only one tool.

Key features:

Simple backup

Protect all important data with ease. Whether you backup up to three PCs or are securing 125 servers and virtual machines, backup configuration will take just a moment.

Dependable storage

What is worth even the most advanced DR solution if you can't get data back, because of storage fail? That's reason we pay an extra attention to the safety and the reliability of Xopero's storage.

Smart recovery

Did system crash? Isn't the hardware working? The failure's type doesn't matter, because all vital data can be always recovered in few minutes.

Complete protection

Real end-to-end data protection from single device to the whole IT infrastructure. It doesn't matter where your data is stored.

Secure data migration

Recover lost data and easily migrate users' system or applications settings with only few click.

Top Secret Data

All files are protected by unbreakable AES 256-bit encryption, ensuring the best protection of your business data

XXI century Sync & Share

Xopero prevents from data loss and helps you to collaborate safely by providing encrypted synchronization and data sharing.

Don't forget about smartphones

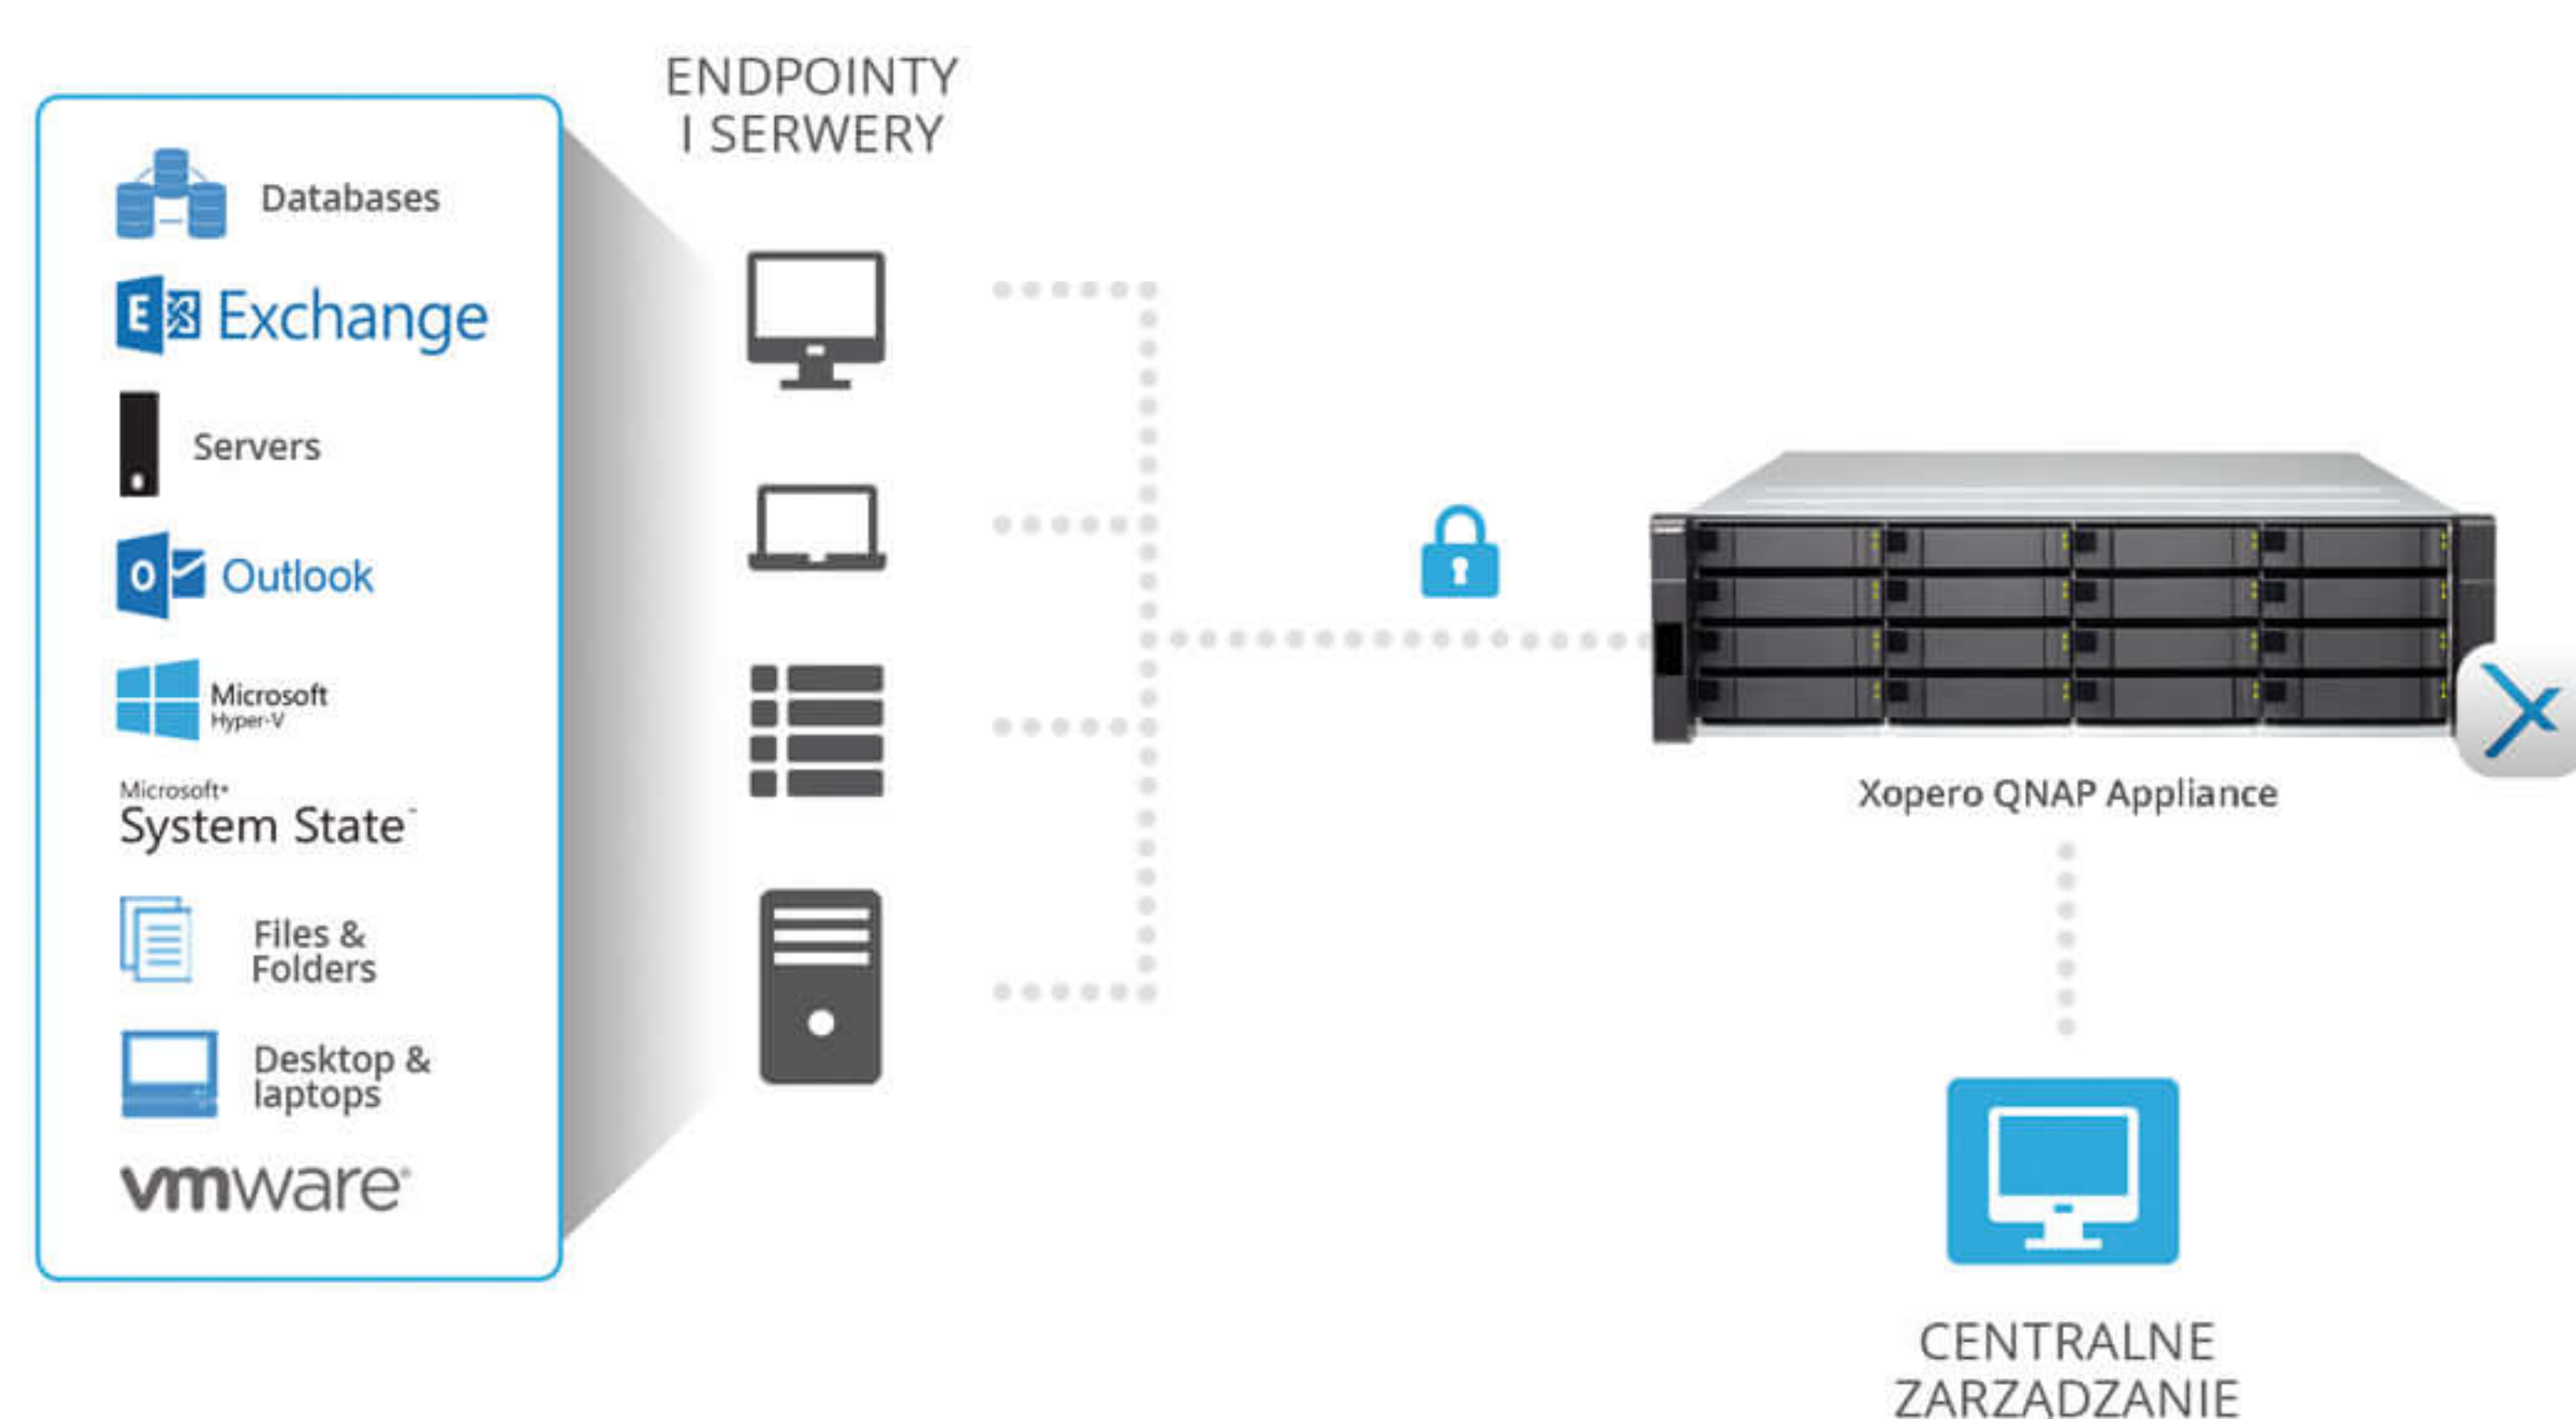

Endpoints are not only laptops and PCs. See how easily you can protect your *smart* devices with Xopero mobile backup.

Automation and smart management

Set the exact date and time of your backups and easily manage all backups with one powerful tool.

Xopero QNAP Appliance

Best enterprise class business continuity tools designed for QNAP

Business continuity for QNAP NAS

Xopero brings the best enterprise class business continuity: the central management, instant recovery, and 256-bit encryption. All these features can be real lifesavers, and now they're available as one complete solution.

Your backup appliance

QNAP offers the best quality and great feature set. It's one of the best selling NAS devices ever. And now thanks to Xopero, your it just got even better. Rest easy that no matter what happens, you can recover your important data in minutes, right off your trusty QNAP.

Why Xopero with QNAP?

1. No additional hardware

2. Simple installation

3. All-in-one

Key technologies

Xopero Smart Recovery

Launch a virtual instance of your backed up device from your trusted QNAP instantly

Smart Virtualization Stick

Instantly launch virtualized mission-critical data with just few clicks and one pendrive

Site-to-site replication

Create replicas of your files on new server in its original format and use it directly on the destination site

Self-healing backup chain + ChControl

Does my data has been backed up correctly? You don't need to worry any more. Each file is checked with SHA1 to ensure that it's exactly the same data in the backup.

No downtime

In business every minute matter, that's why with Xopero can get RTO below 5 minutes + recover not only raw data but setting and configurations too

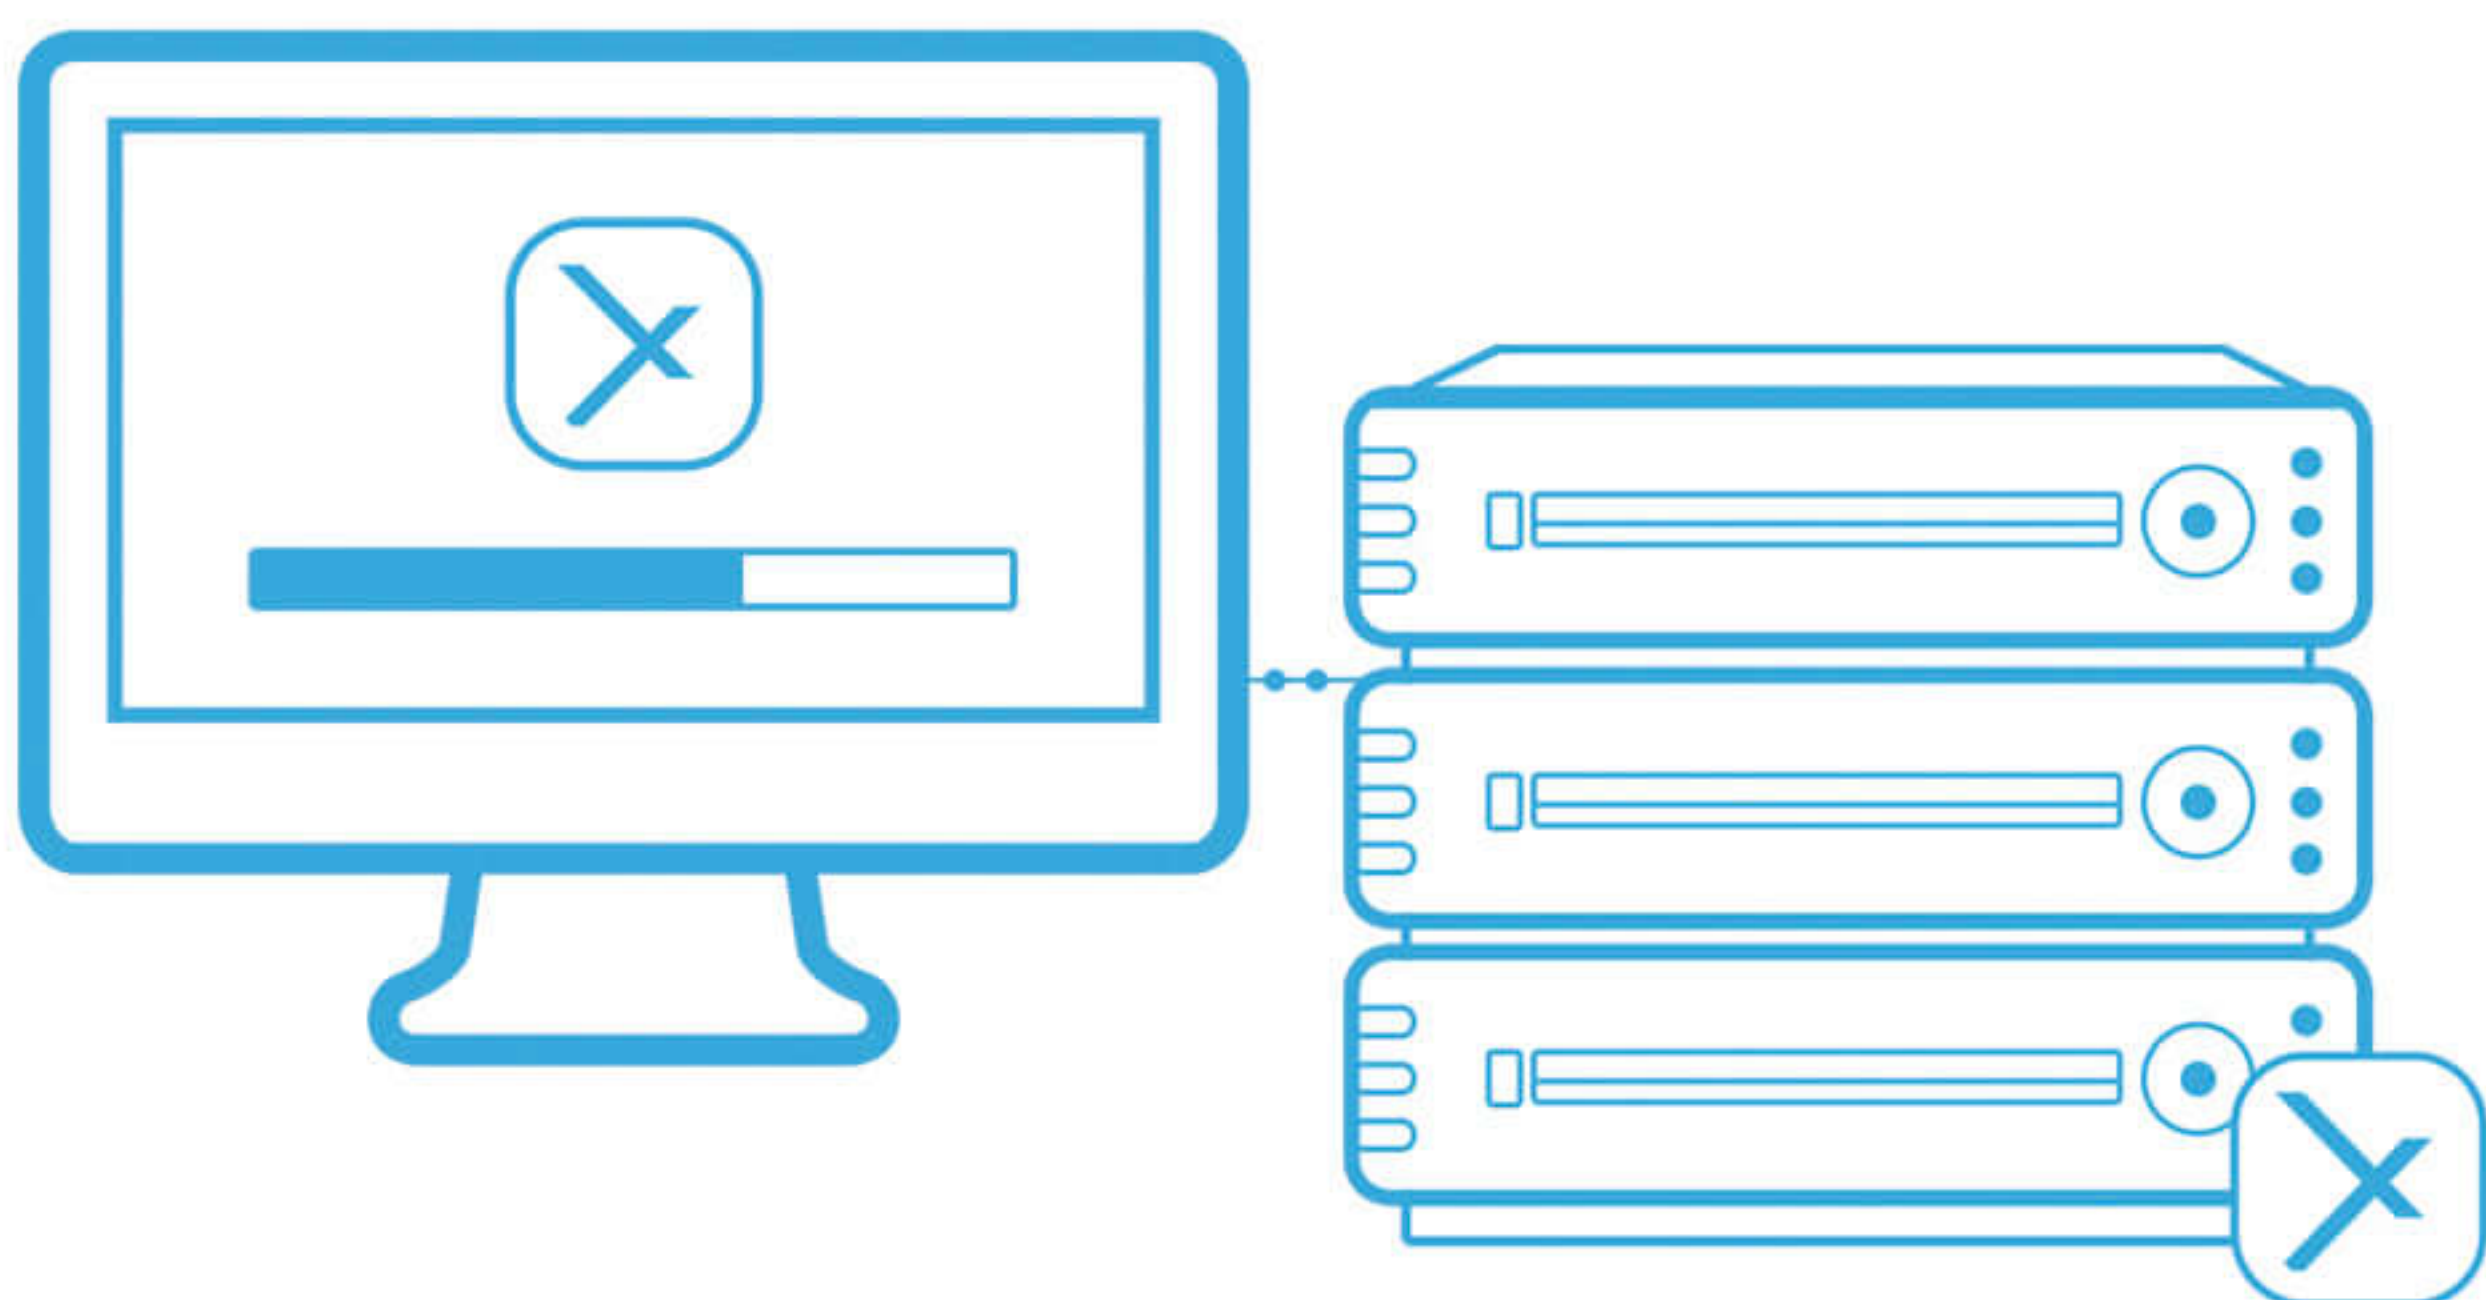

Backup optimization

Time is priceless when it comes to business. Therefore Xopero utilize the latest technologies to optimize backup processes.

Xopero Backup & Restore

Private cloud backup
tailored to your business

What is exactly Xopero Backup & Restore?

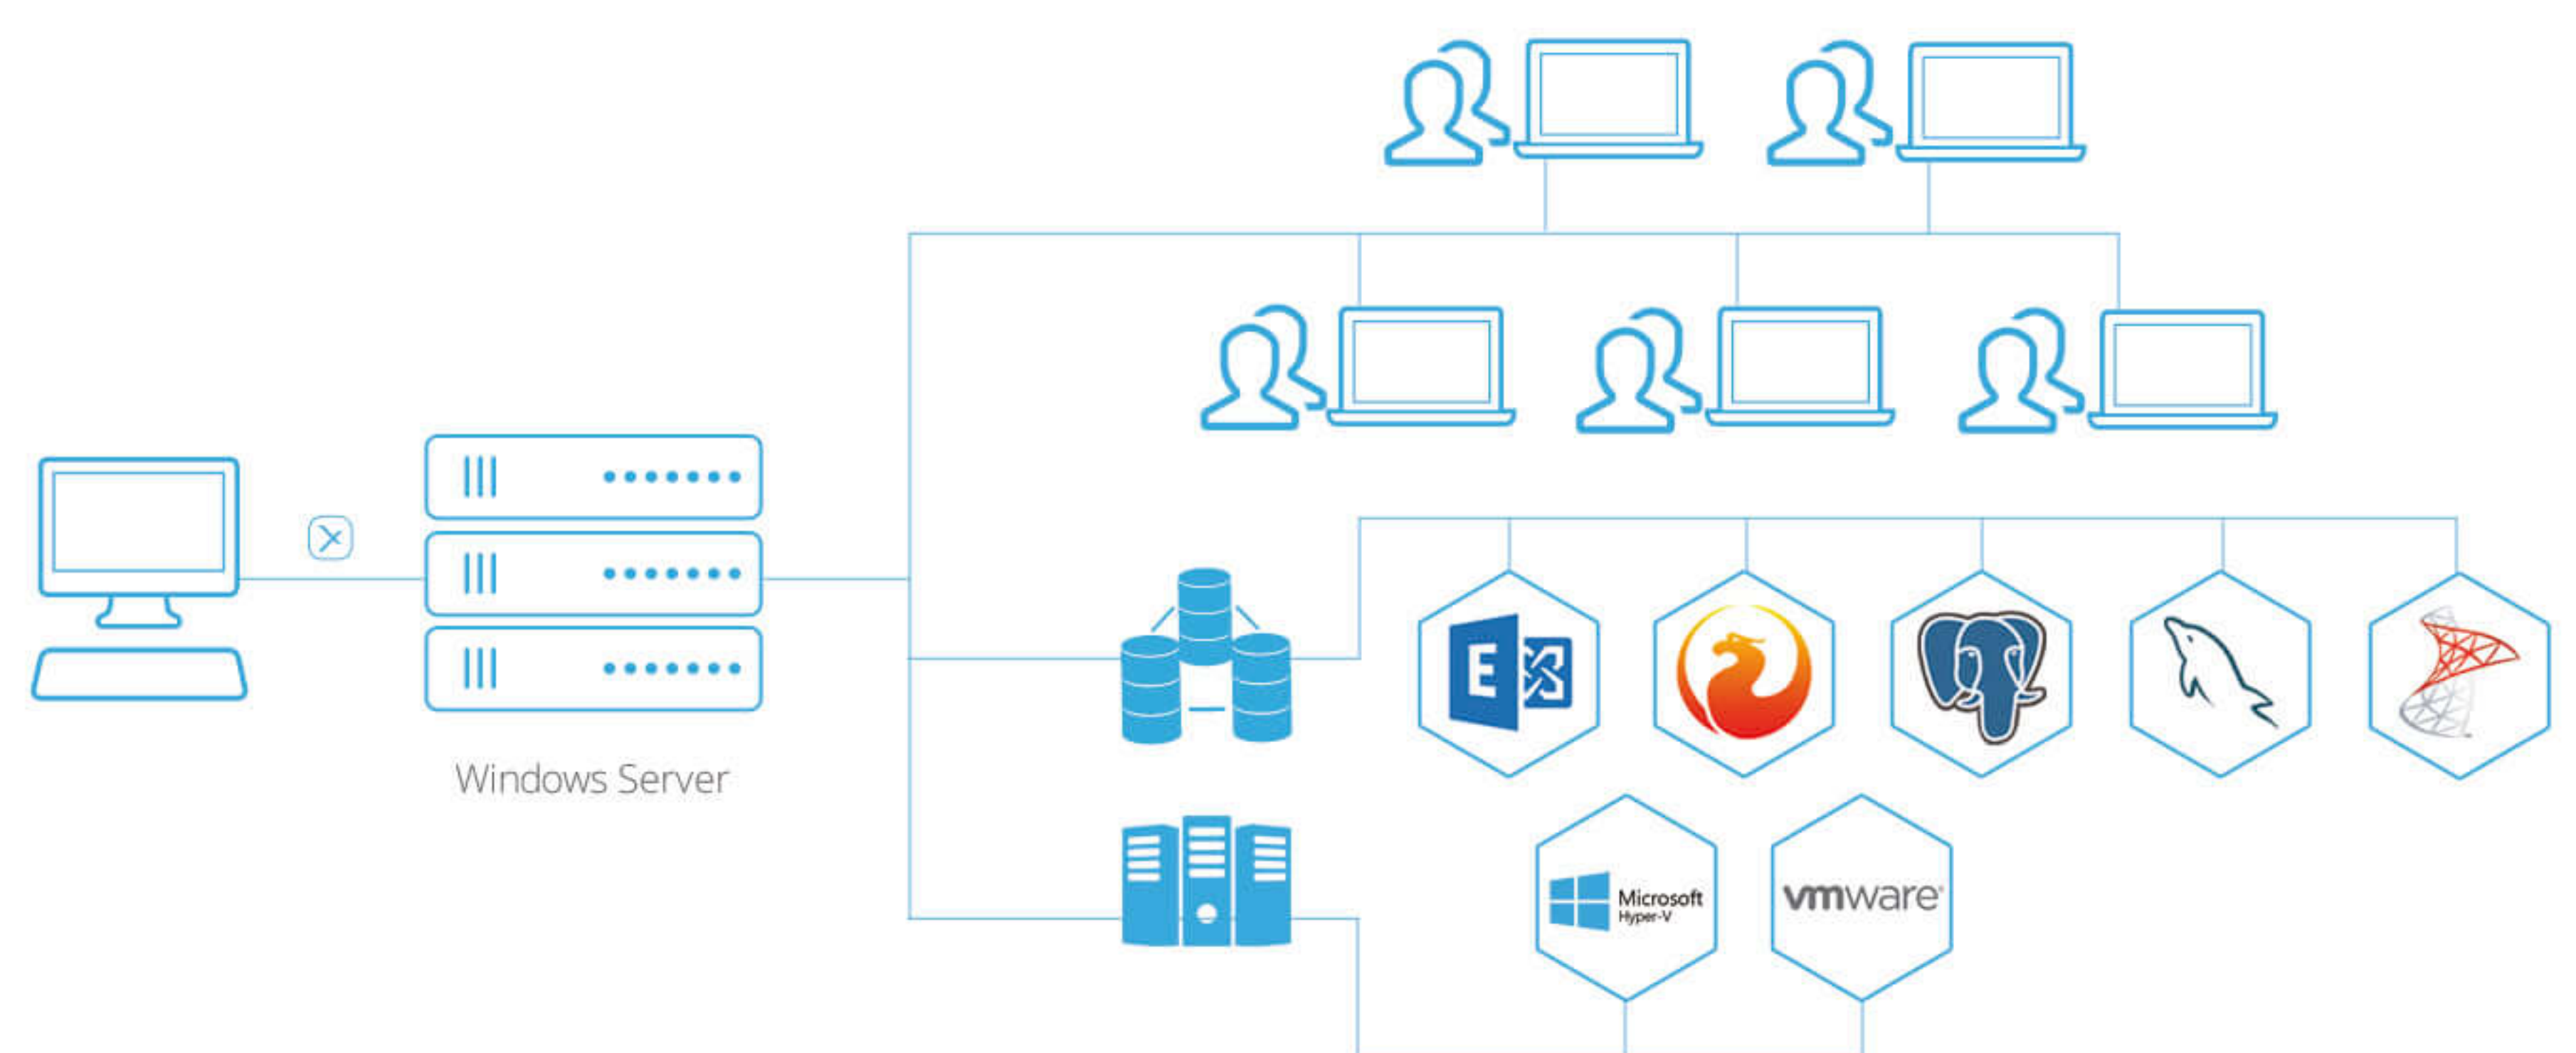

Data loss could mean downtime and financial loss for your business. Xopero Backup & Restore is a comprehensive backup & recovery solution, which offers full protection of all critical data - from single endpoint to servers and virtual machines as well.

And because our solution can be implemented on any IT infrastructure, there is no additional costs. You already have all necessary components.

You are saving time & money

Xopero Backup & Restore is a complex tool for creating backup policy. Installation is complete within few minutes and then you can begin to perform and manage all backups in your company.

Xopero is a technologically advanced business-class solution, designed for SMB and corporations, as well.

Key functions

Fast deployment

It is an easily implementable solution. Deployment process is fast and does not require any extra time or human resources.

Savings

Xopero Backup & Restore can be implemented on any IT infrastructure, so there is no additional costs.

Central management

It is a comprehensive tool which allows to manage and configure all backup processes in the whole structure of the company.

Security

Xopero uses an AES algorithm and SSL transmission to protect data. Both solutions are used by banks to secure online financial transaction.

Disaster recovery

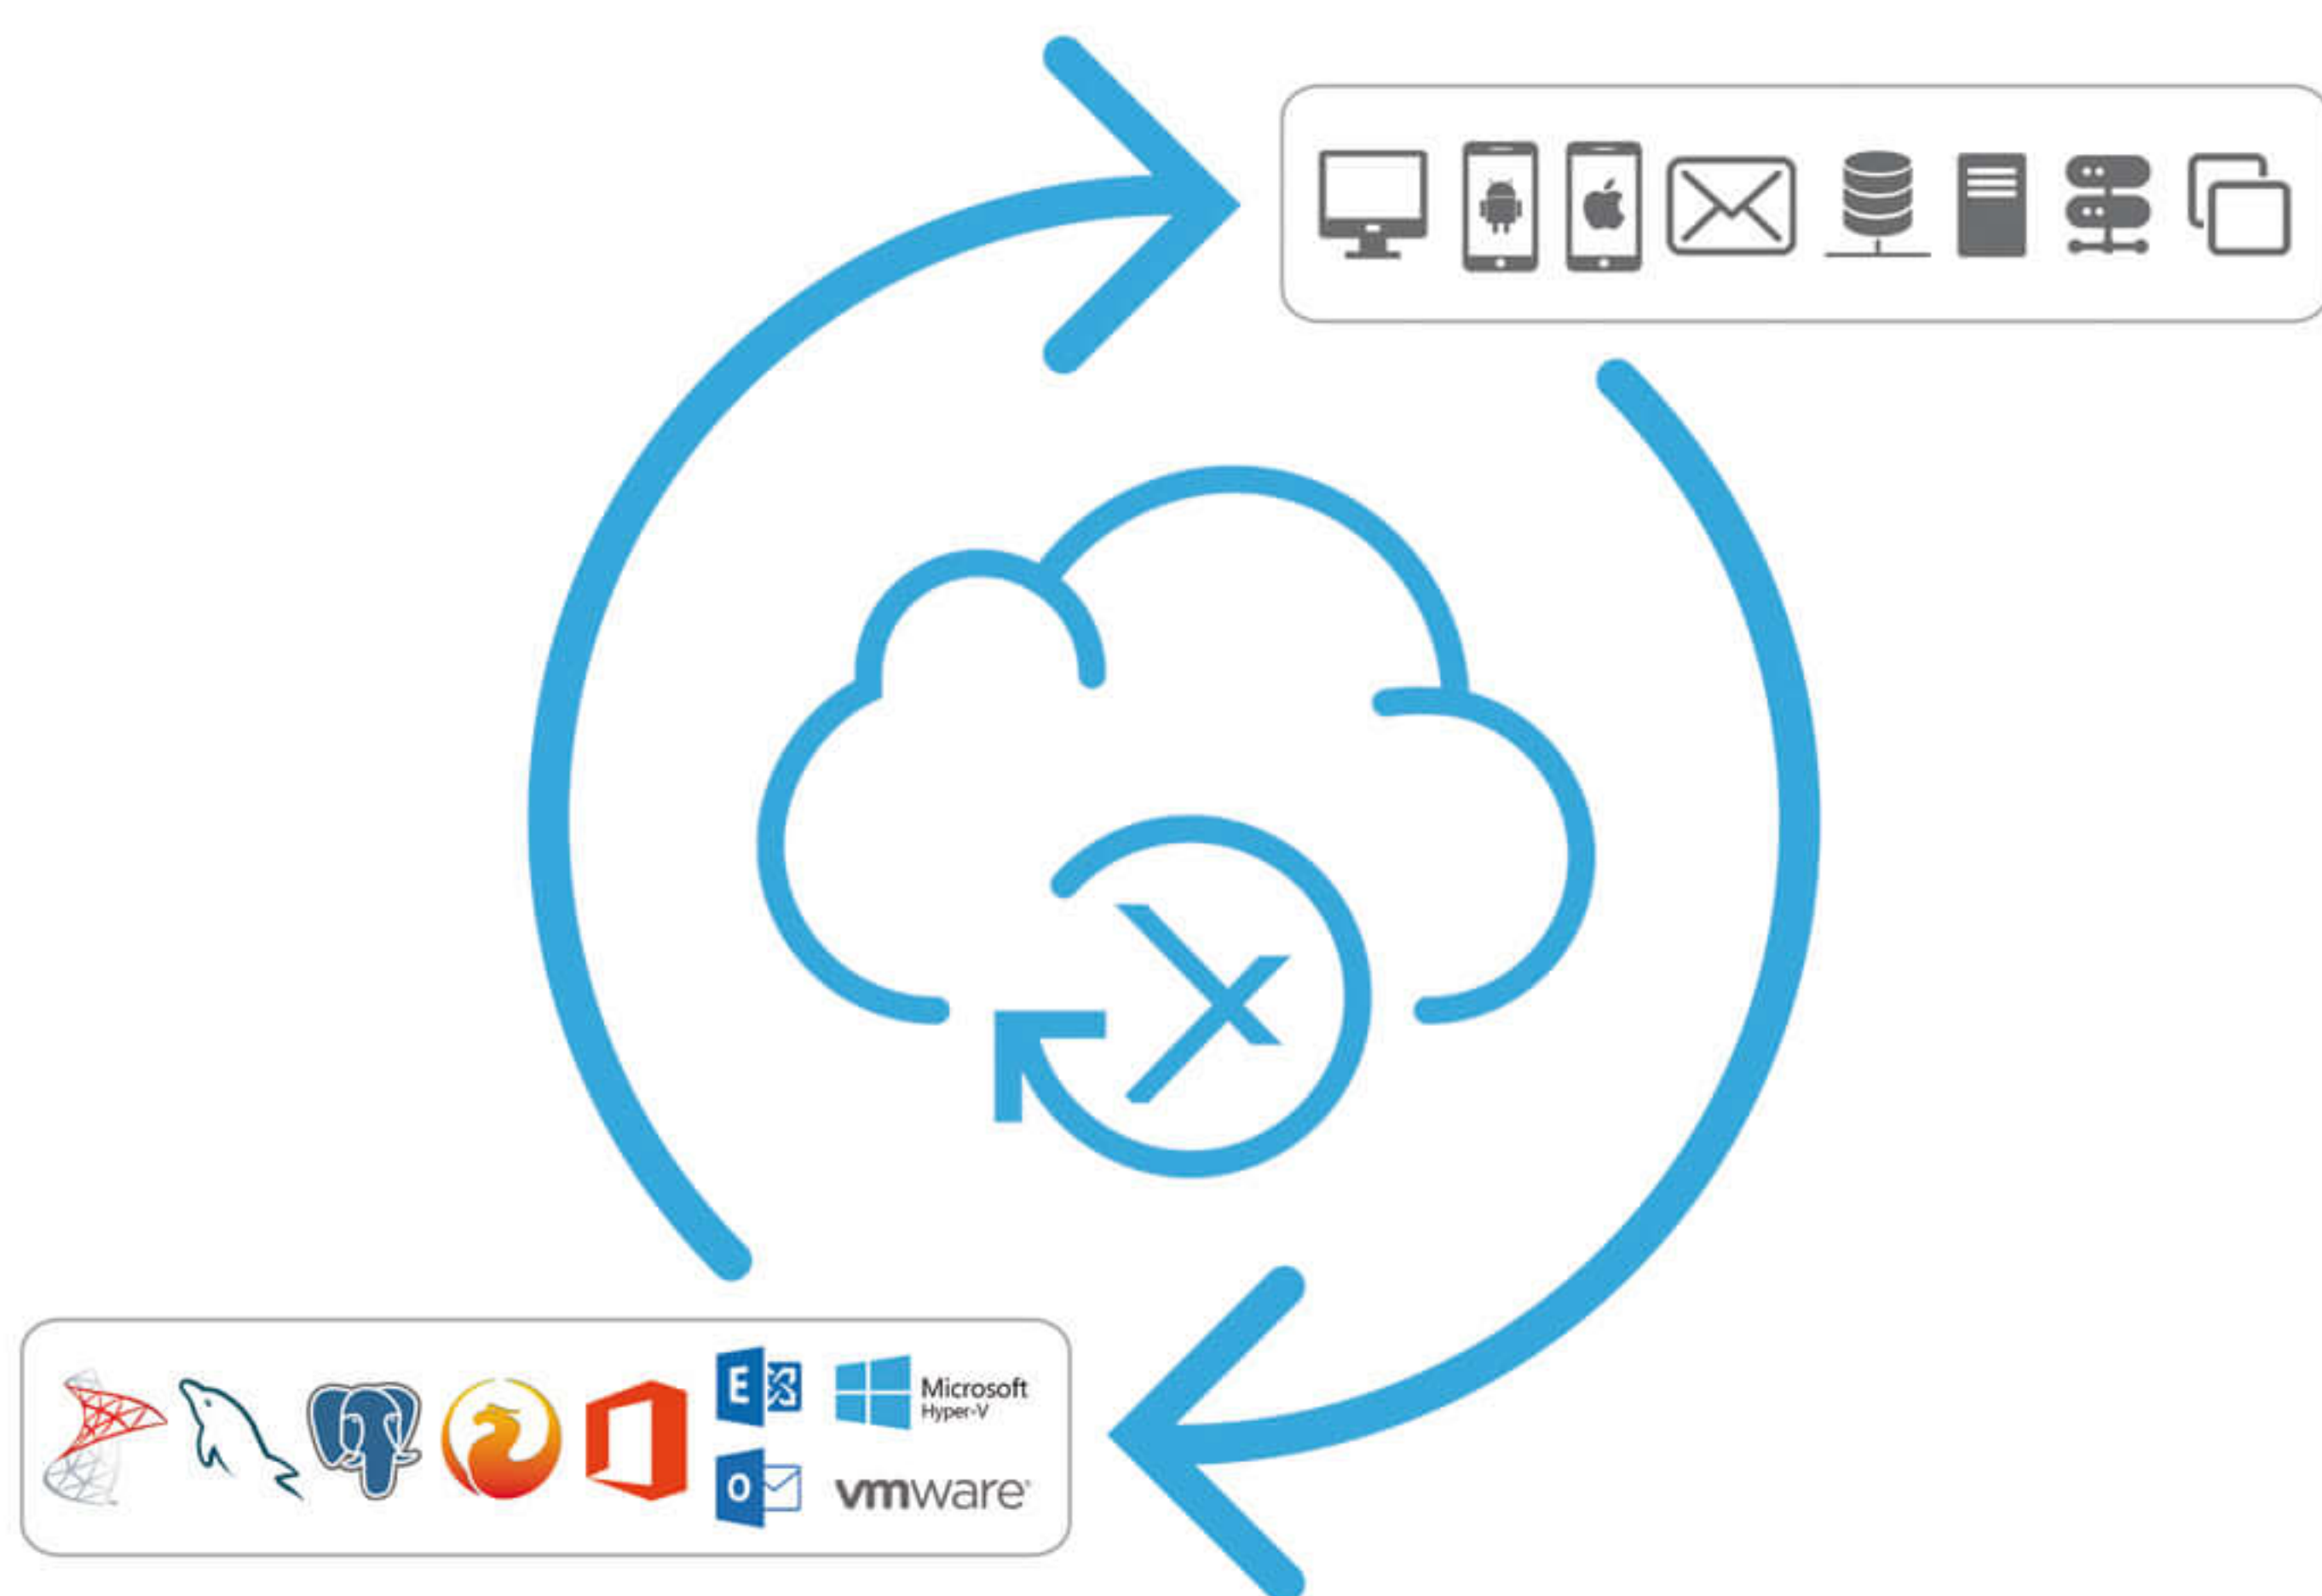

Xopero provides a comprehensive protection of the entire business environment. Disaster recovery planning has never been so easy before.

Backup optimization

Time is priceless when it comes to business. Therefore Xopero utilize the latest technologies to optimize backup processes.

Xopero Cloud Backup

Online backup solution
for a demanding business

What is Xopero Cloud Backup?

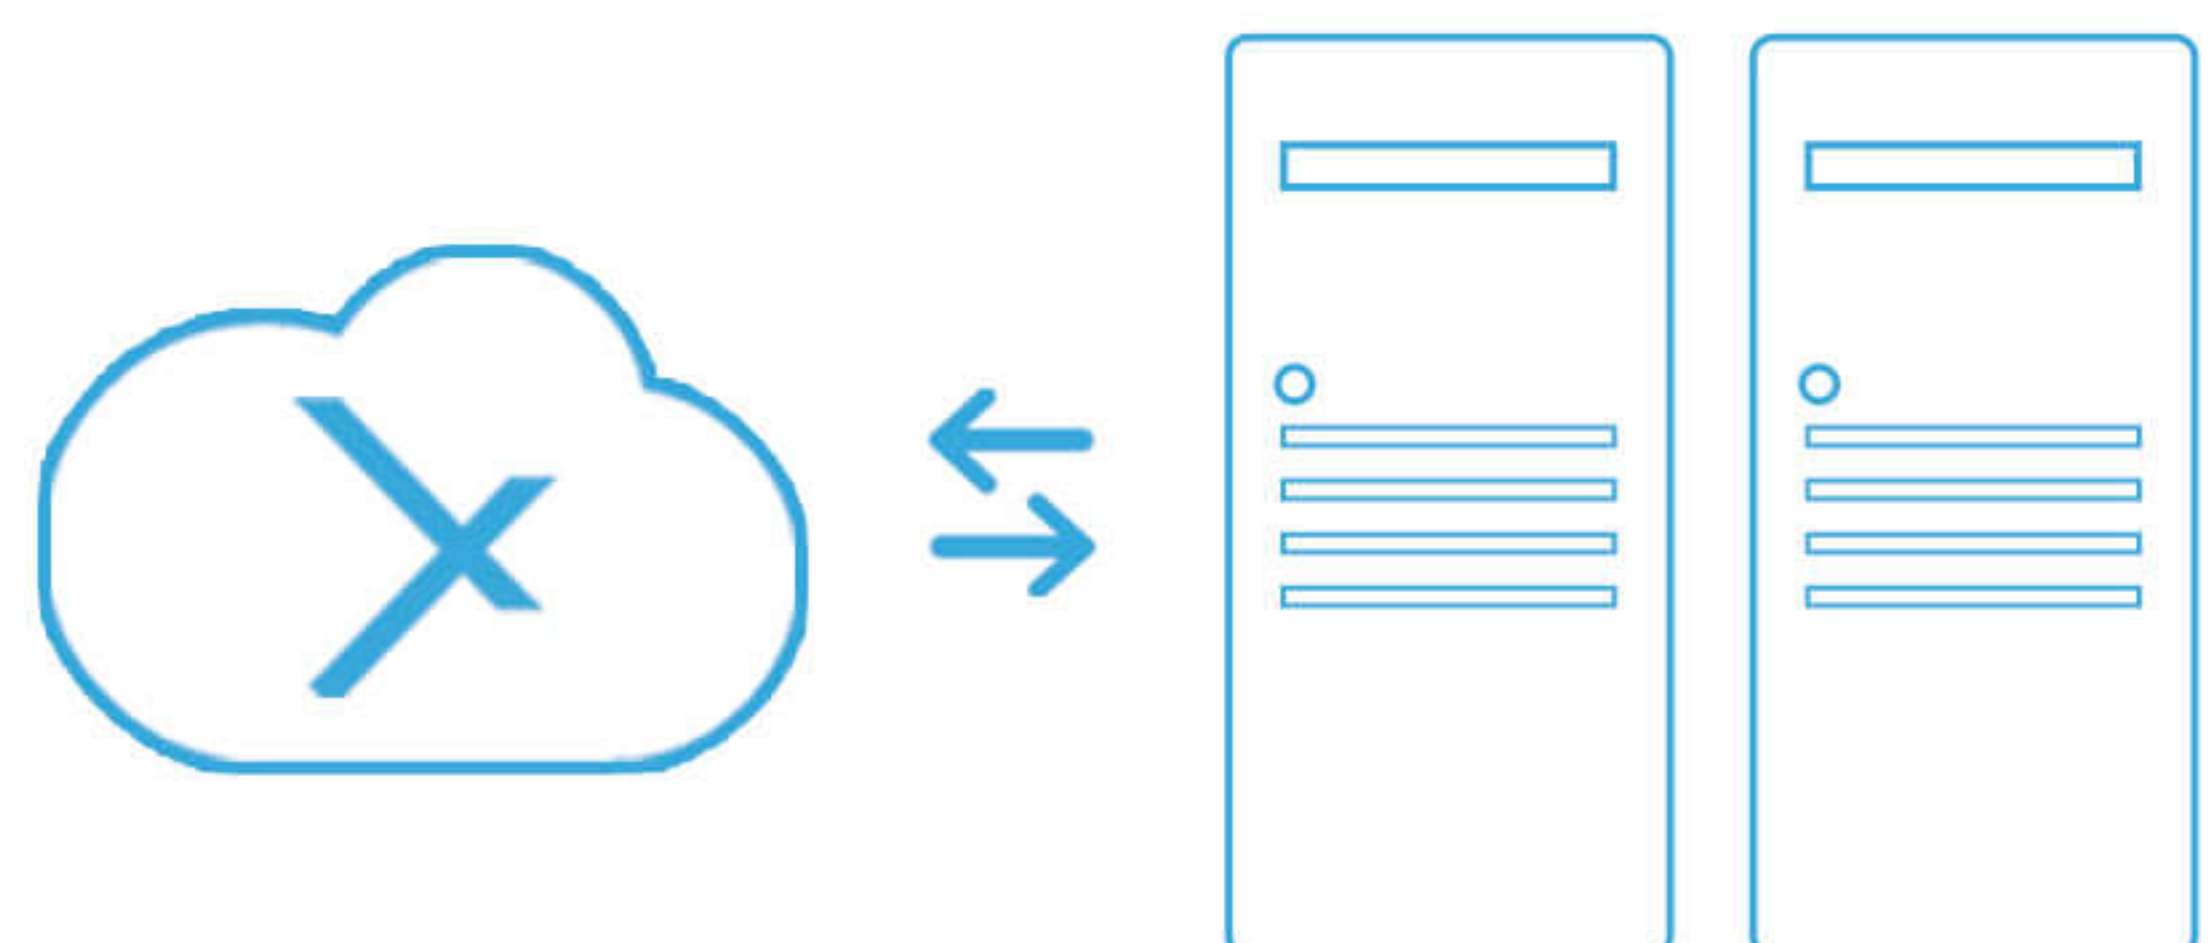

Xopero Cloud is an advanced solution for online backup, which allows unlimited protection of computers, databases, and physical and virtual servers.

Avoid the high cost of deploying process or losing critical business data. Check a new generation of cloud backup solution, that combine the enterprise security and smart recovery to keep data safe and accessible no matter what.

Maximall cloud security

Before shipment to one of our data center (USA, Germany, Poland) all data are encrypted using AES 256 algorithm.

In order to avoid any downtime to your business data are stored in two separate locations. Second localization gives a guarantee that your data can be always recovered.

Key functions

Central management

It is a comprehensive tool which allows to manage and configure all backup processes in the whole structure of the company.

Comprehensive protection

Xopero allows a backup & recovery of all critical data: from endpoints, databases and physical & virtual servers, as well.

Secure data center

Data is stored in two separated localisations, which guarantee that you can access your backed-up data anytime

Data encryption

Xopero uses an AES algorithm and SSL transmission to protect data. Both solutions are used by banks to secure online financial transaction.

Briefcase

Encrypted synchronization and data sharing. On every device you will find the exact same set of documents, heavily protected.

Mobile backup

Xopero Cloud Personal

Backup and sync & share platform

What is Xopero Cloud Personal?

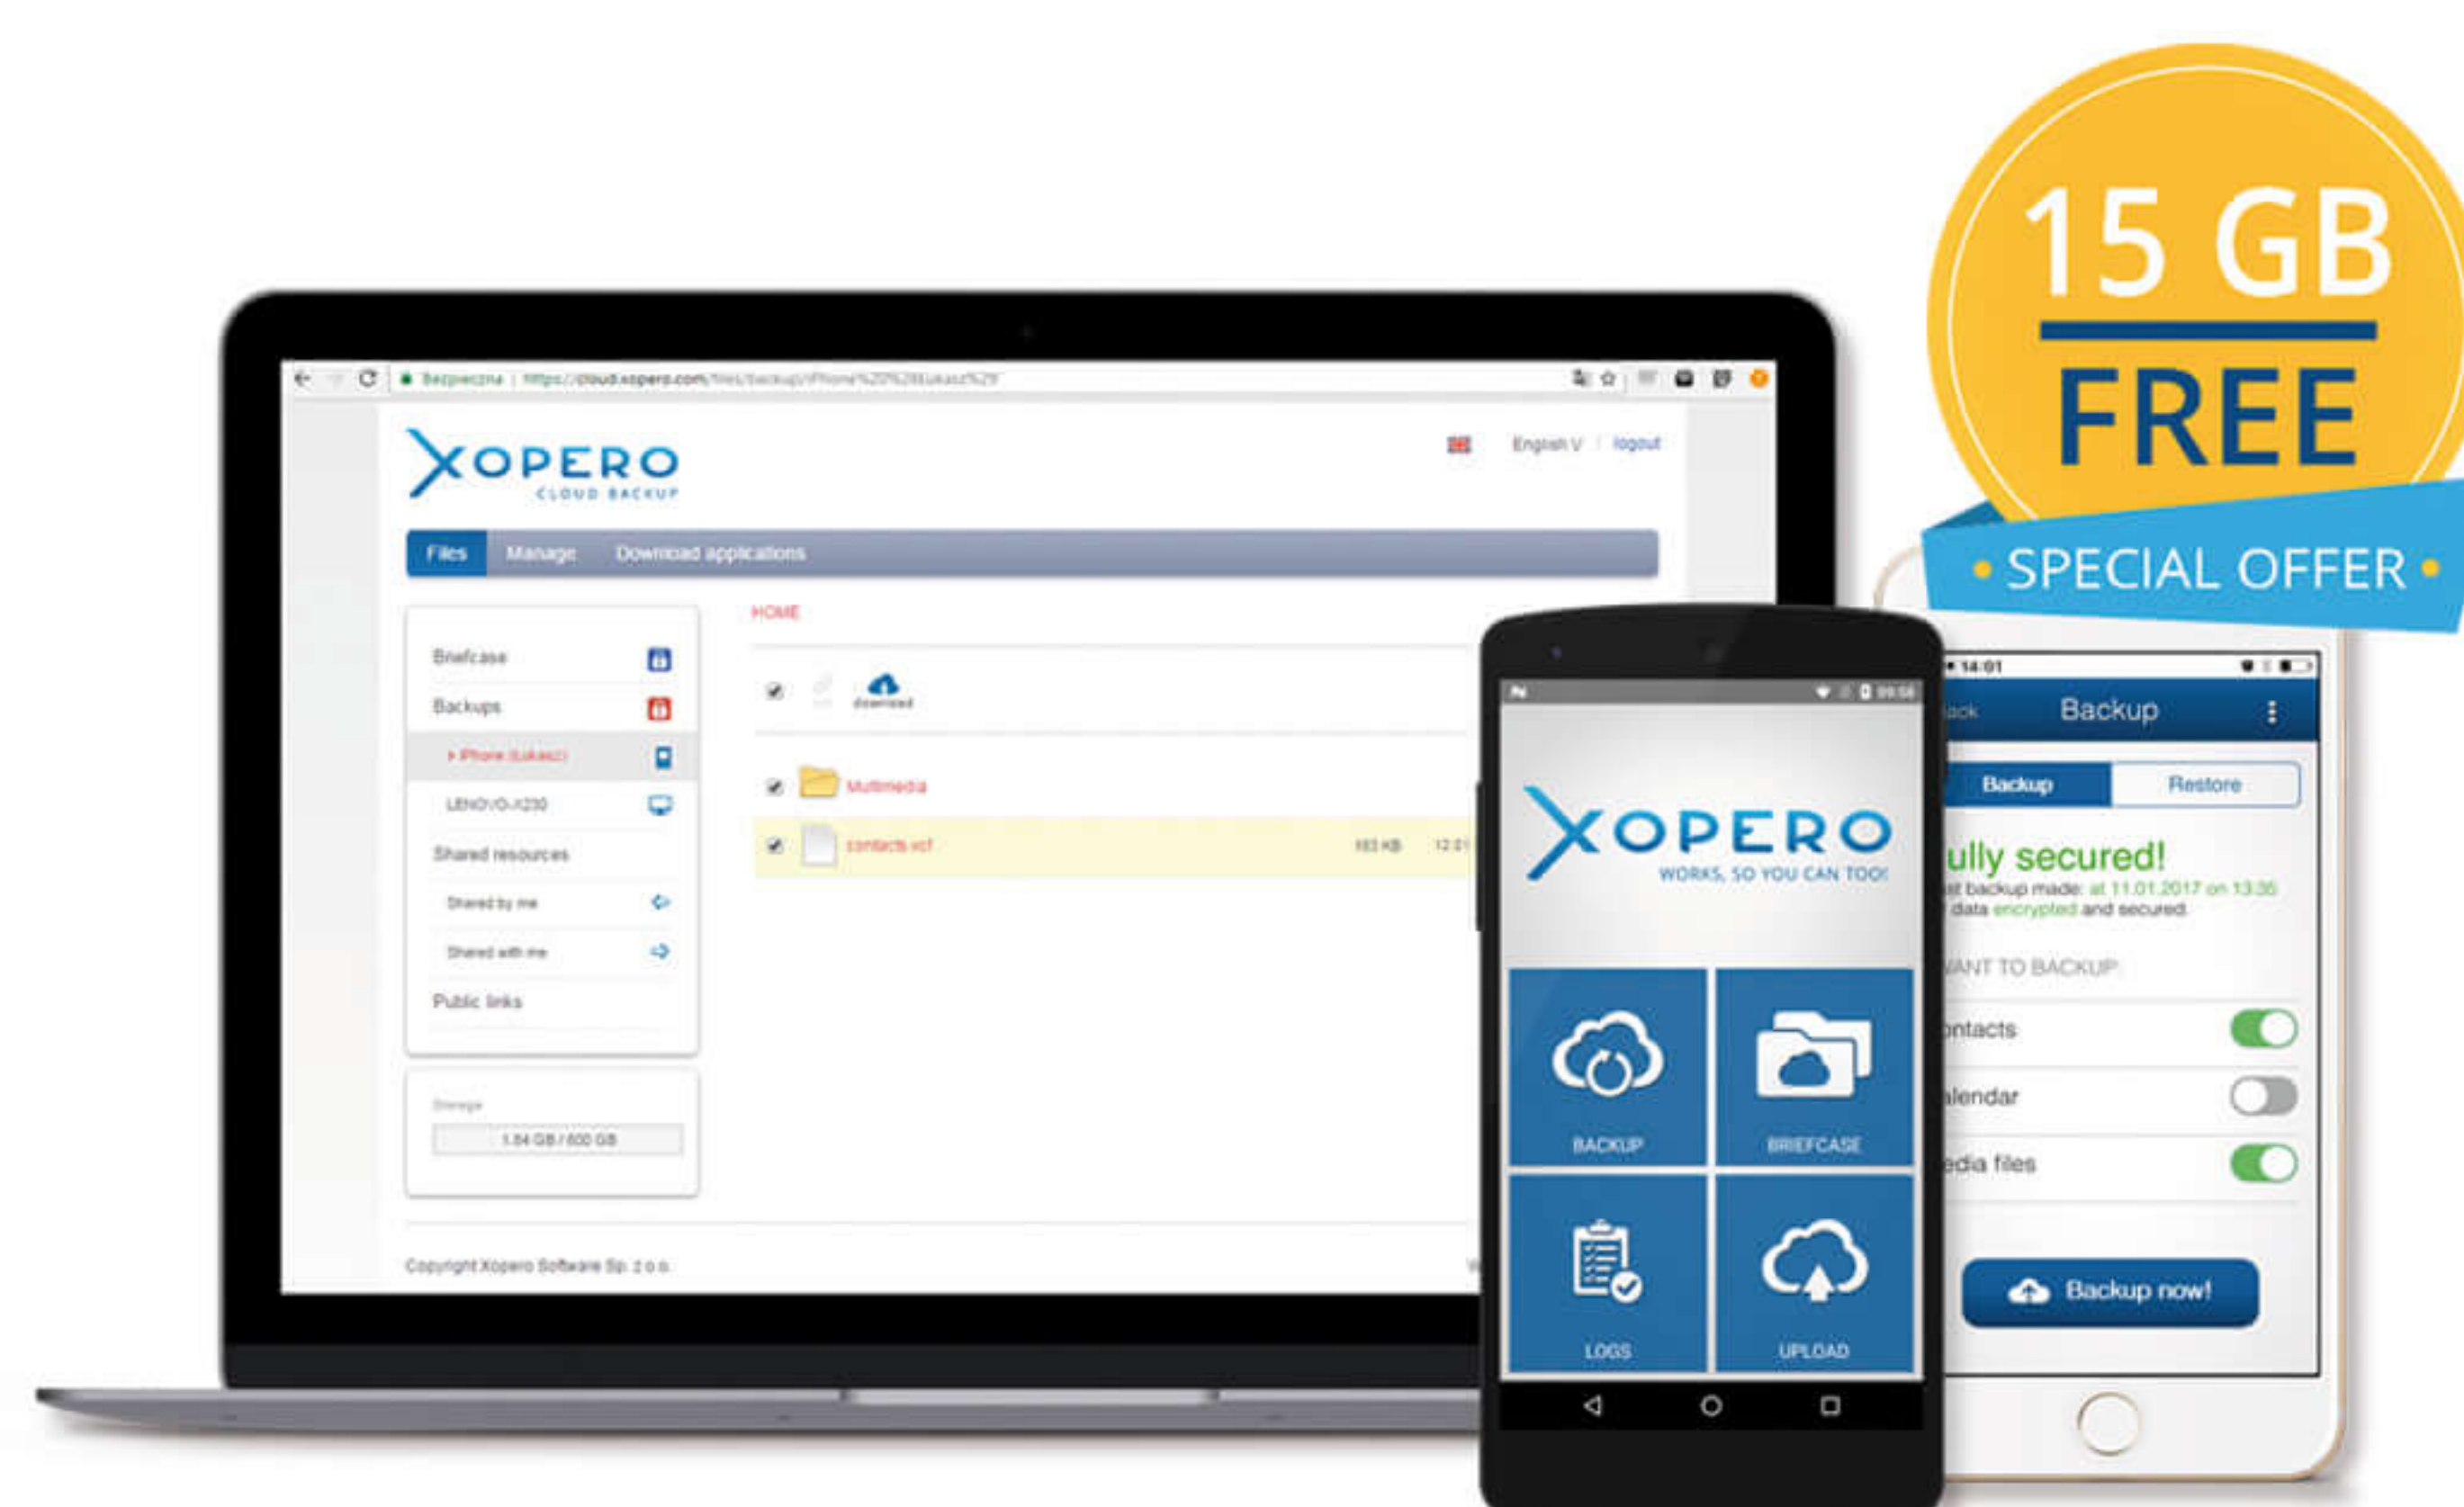

Xopero is a modern cloud backup solution with an advanced sync & share tool. Regardless of whether you run a small business or just want to back up photos and videos from the last summer, our solution will protect all your precious data stored on computers and mobile devices.

An intuitive interface, simple backup configuration and Briefcase application to sync & share your data – Xopero offers you a quick and easy way to ensure the safety of your data.

Your files at your fingertips

Manage your data anywhere and everywhere you need it. Install our software on your mobile device and connect to the Internet. Simple? Yes!

Thanks to sync & share feature your files are automatically sent to all the devices with installed Xopero application. It's an easy and convenient way to exchange information.

Secure as... Xopero Cloud Personal

1. AES 256 algorithm

All data is encrypted using AES 256 algorithm, the same that banks use to secure financial transactions.

2. SSL encryption

For additional security, all file transfer takes place via SSL transmission.

3. Secure Data Center

All data is stored in two separate locations, so even in the event of failure of one server, access to the data is still possible.
