

Computer backup with the #1 most intuitive solution

One small accident, human error, hard drive failure, or virus can destroy all the important data you keep on your workstation or laptop. With Xopero you are sure that in the event of failure your data is protected, accessible, and recoverable from any point-in-time.

Easily protect your Windows-, Linux- or macOS-based workstation or laptop.

Automatic backup
of your important data
- no matter where you keep it

How it works?

1 Sign up, install the backup agent and manage it all online

2 Backup performs automatically according to your backup plan

3 Recover your data anytime you need from any point-in-time

Workstation

Laptop

Server

Microsoft 365

Key features:

Cloud-native app - manage centrally and remotely

On-premise, cloud, hybrid - any storage

Microsoft 365 Backup add-on

Policy-based backup and advanced plan customization

Point-in-time recovery of any file, folder and entire system

Smart disaster recovery features in a package!

Easy to **start and use**

It's hard to say how simple and intuitive our cloud-native app interface is but once you see it, you won't take a look at another one.

Easy to use

You don't need advanced IT skills or external help to make sure your data is secured and easily accessible.

Keep data on-premise or in the cloud

Local, SMB, NAS, AWS, Azure, or all - use your local or/and cloud storage, safe money, and do not invest in additional IT infrastructure. Your PC is all you need.

Simple, automatic **backup**

Easily protect your computer against any event of failure and never lose access to your critical data.

Smart File or Image Backup

Schedule automatic file-level or image-level backups (full, incremental, differential) whether you need to protect chosen data or the entire system.

Set it and forget it

Set your plan once and the backup will perform automatically according to defined schedule, retention and frequency.

Backup **performance**

We give you unlimited setting possibilities so you can customize a backup plan that fits your workday, boosts execution, and reduces storage usage.

Advanced plan customization

Use more advanced settings if you need - backup window, retention, schemes, compression, encryption, backup on trigger, and much more...

Intuitive super-friendly interface

We guarantee the simplest, intuitive, and data-driven user interface on the market. Powerful, precisely-designed dashboards combine ease of use and precise management.

Plan-based backup

Data, storage, backup type, schedule and advanced settings - easily customize your backup plan.

Unlimited retention

Store all versions, define the number of backups, or the time a given copy should be kept to optimize storage capacity. GFS, Forever Incremental, FIFO - choose your scheme.

PROTECT YOUR DATA **AGAINST...**

Ransomware and cyber-attacks

Employee errors

Hardware failures

Natural disasters & coffee splits

Computer theft

...before it's too late!

EASILY APPLY THE **3-2-1 BACKUP RULE**

Have **3 copies** of your important files

Keep them on **2 different devices** or storage media

Store **1 copy offsite**

Do your best at work

If you set up backup during working hours, it performs invisible in the background capturing any changes you make.

Security first...

We do not provide you with only a backup solution - we guarantee peace of mind in every situation.

Safe, secure, encrypted

No one can read your data because everything is encrypted before it leaves your computer with a password known only by you.

No single point of failure

You can lose access to our solution, but as long as you have the encryption key, you will never lose your data.

Instant recovery

Whether you're restoring a single file or an entire system, do it instantly and get back to business.

Disaster recovery & ransomware protection

Have immediate access to files even if the disk is encrypted or compressed. Create virtual machines and restore your data without any need for export.

Easy migration

Restore your system to the same or different hardware - even the one with different system parameters and easily migrate your data.

Secure Password Manager

Securely store and manage all your passwords (internal and external). You don't have to remember or write them down - if you need to use it, just choose from the list.

Granular, point-in-time restore

Take advantage of the granular, fast, and point-in-time recovery of all or only selected types of data from a previously made image backup.

Microsoft 365 Backup add-on

Using Office 365? Protect your organization's data!

- Exchange, OneDrive, Calendars
- Easy to start and use - in 3 steps
- On-premise, cloud, hybrid (any storage)
- Predefined backup plans
- Unlimited retention
- Granular recovery
- Cross-user recovery
- Intuitive dashboard #1
