

WHITEPAPER

Secure business collaboration with Sync+

Business daily use synchronization tools, the one of the greatest benefits of the mobile revolution. Who would like to go back to the days when all changes were made only in the office? Market offers many solutions, but not all are safe and will protect your data against unauthorized access.

Xopero not only provides an easy and comprehensive way to manage backup policies, but also allows online collaboration on your business documents. And because our solutions was designed with business in mind, they meet all safety standards.

Learn about Briefcase application

Briefcase application is truly unique. It's the only tool on the market that allows an encrypted synchronization and secure data access. You can synchronize data between the specified directory on your computer, the servers and other devices under one account. And on every device you will find the exact same set of documents, heavily protected.

All operations are performed automatically. You only have to make a change (add, edit or delete a file) in the destination directory. Encryption takes place on the user's device and is done with separate key, (different than the one used during backups), that is generated automatically. What does it mean? It means that all your data are encrypted before they leave your computer and not like on many other available solutions only when they are stored in the data center. Xopero is a business class solution and offers both means of

Synchronize data between different devices

When you add, edit or delete files from the Briefcase, changes occur automatically on all your devices with installed application.

Online collaboration has never been so simple

1

Synchronize

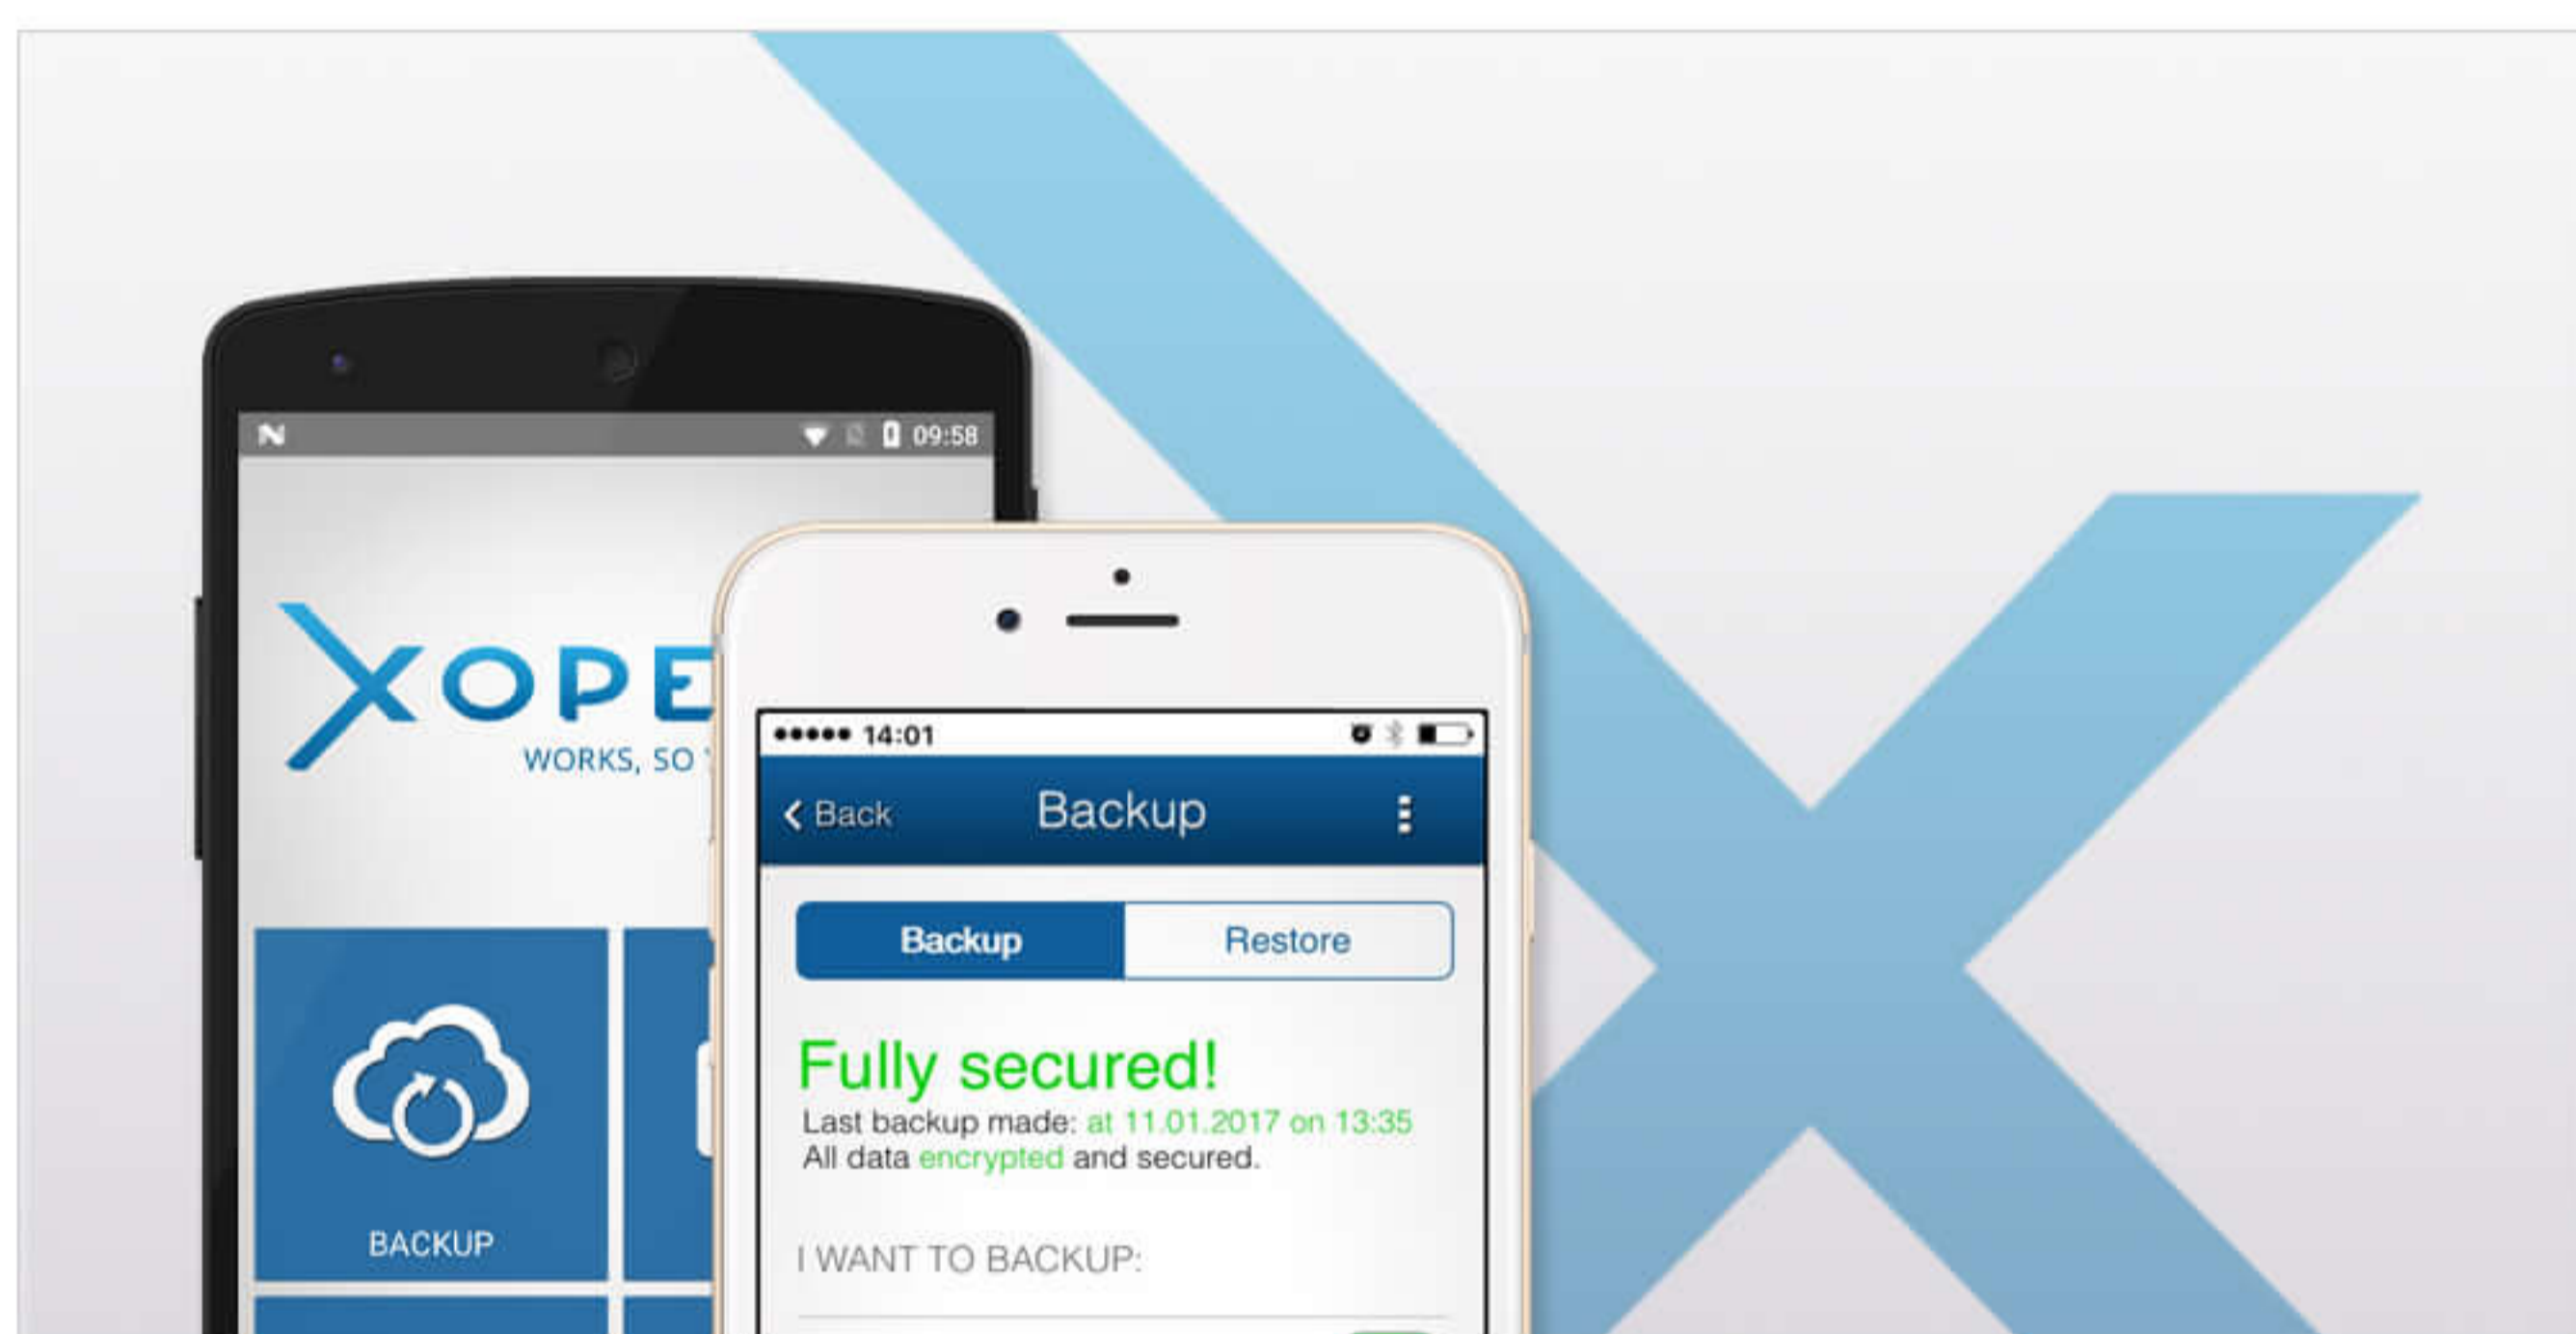

Exchange data between all the devices with installed application.

2

Access

Quickly and easily share files with outside world. Sending a mail with large attachment no longer will be a problem.

Computer, tablet or phone - Xopero works on any device on which you install the application. For maximum security, all data is encrypted using AES 256. **What is AES 256?** This is one of the safest algorithm in the world and the international safety standard. Among others, it is used by banks to secure financial transactions and by NSA (the National Security Agency) to protect top secret documents.

Data under the special protection

Xopero products are the only ones on the market that encrypt synchronized files on the user side – on mobile devices as well. For additional protection all files in the Briefcase are encrypted by briefcase key – that is automatically generated and stored on servers. Therefore there is no risk that the data will "leak" outside. There will be never any unauthorized access – your persona login, password and briefcase key will guarantee that.

All your files are stored in encrypted form in two separate locations. So even in the event of failure of one server, access to data is still possible.
